

Module Handbook

Master Informatik / Computer Science (M-IN)

**Faculty 2 - Technology, Computer Science
and Economy**

Full time studies Master Computer Science

Head of study course:
Prof. Dr. Marx
01.09.2023
Valid from winter term 2023/24 on

Table of Content

1	<i>Compulsory Modules</i>	3
1.1	Artificial Intelligence (M-IN-IN06).....	3
1.2	Architecture of Information Systems (M-IN-IN02)	4
1.3	System Analysis (M-IN-IN04).....	5
1.4	Advanced Database Systems (M-IN-IN03)	6
1.5	Scientific Course (M-IN-IN05)	7
2	<i>Mathematics</i>	8
2.1	Higher Mathematics (M-IN-MNS01)	8
3	<i>Practice</i>	9
3.1	Master Thesis (M-IN-PP01)	9
4	<i>Complementary Modules (Computer Science)</i>	10
4.1	Advanced Data Mining with R (M-IN-WP36) / AI	10
4.2	Computer Vision (M-IN-WP35) / AI	11
4.3	Planning and Scheduling (M-IN-WP32) / AI	12
4.4	Network Security (M-IN-WP41).....	13
4.5	ERP in the cloud (M-IN-WP40).....	14
4.6	Natural Language Processing (M-IN-WP34) / AI	15
4.7	Autonomous and Mobile Robots (M-IN-WP33) / AI.....	16
4.8	Individual Profiling (M-IN-WP28)	17
4.9	New Database Systems (M-IN-WP22)	18
4.10	Simulation (M-IN-WP09)	19
4.11	E-Learning (M-IN-WP03)	20
5	<i>Complementary Modules (Comprehensive)</i>	22
5.1	Advanced Project Management (M-IN-WP01).....	22
5.2	Innovation and IT (M-IN-WP39)	23
5.3	Advanced Software Engineering: Principles & Structures (M-IN-WP38)	25
5.4	Business Models and IT-Strategy (M-IN-WP37)	26
5.5	Entrepreneurship (M-IN-WP23)	27

1 Compulsory Modules

1.1 Artificial Intelligence (M-IN-IN06)

Artificial Intelligence, Künstliche Intelligenz (ARTI)						
ID	Workload 180h	ECTS 6	Term at study start ST (start): 2 WT (start): 1		Frequency winter term	Duration 1 term
1	Course Lecture plus workshops		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	Learning Outcomes The students know advanced methods of artificial intelligence. Especially deep learning and deep reinforcement learning algorithms are understood by the students and can be applied to new problems. The students know how to train, tune and debug Deep Learning models.					
3	Content <ul style="list-style-type: none"> - Neuronal networks - Generative adversarial networks - Attacks against neuronal networks, adversarial examples - Convolutional neural networks - Recurrent neural networks - Reinforcement learning 					
4	Course form Lecture combined with student workshops, project work and presentations; optional excursion					
5	Prerequisites for attending Formal: none Content: none					
6	Form of examination Assignment Project work and oral examination (assessment of the project presentation)					
7	Prerequisites for granting ECTS Presentation of assignment/project work with positive assessment					
8	Utilization of the module (in other studies) This module is not used in other courses					
9	Weight for the final score Weighting according to the ECTS points					
10	Module commissioner: Prof. Dr. Florian Dahms Tutor: Prof. Dr. Florian Dahms					
12	Literature: Stuart Russell, Peter Norvig; Artificial Intelligence: A Modern Approach, 4th Edition (2020) Ian Goodfellow, Yoshua Bengio, Aaron Courville; Deep Learning (2016) Richard Sutton, Andrew Barto; Reinforcement Learning: An Introduction (2018) C. Steger, M. Ulrich, C. Wiedemann: Machine Vision Algorithms and Applications, Wiley-VCH, ISBN 978-3-527-41365-2 F. Chollet: Deep Learning with Python, Manning Publications, ISBN 978-1617296864 https://docs.opencv.org/4.6.0/index.html https://pyimagesearch.com					

1.2 Architecture of Information Systems (M-IN-IN02)

Architecture of Information Systems, Architektur von Informationssystemen (SYSE)						
ID	Workload 180h	ECTS 6	Term at study start ST (start): 2 WT (start): 1		Frequency winter term	Duration 1 term
1	Course Lecture, Tutorial, Practical Project		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	<p>Learning Outcomes</p> <p>After successful completion of this module, students will acquire the following competencies the following competencies:</p> <ul style="list-style-type: none"> - They understand the principle of continuous integration and can use the corresponding tools productively. - They are familiar with the concept of design patterns and can select and implement suitable design patterns for a given problem and implement them. - You are familiar with common architecture principles and can validate the validate compliance with design rules. - You have mastered simple DevOps techniques and are able to put software into operation in an automated and reproducible manner. - You can perform user interface testing as well as testing against Metrics and code smells and automate them. - You are familiar with advanced activities of the Configuration Management git (branch, merge, cherry-pick). - You are familiar with software maintenance challenges and can deal with them appropriately. - You are aware of additional challenges in the globalization of software development and can software development and can deal with them appropriately. 					
3	<p>Content</p> <p>This module builds on the Software Engineering I module and goes into greater depth many of the techniques covered there. This includes advanced activities in software engineering along with the associated concrete techniques and tools:</p> <ul style="list-style-type: none"> - Build Systems - Continuous Integration - Continuous Deployment - DevOps principles and Infrastructure as Code - Modern documentation tools - Automated UI testing - Metrics and Code Smells - Architecture Principles - Architecture Validation - Design patterns - Design Documentation and Reviews - Evolution and Maintenance - Reverse Engineering - Global Software Engineering - Acceptance and implementation of software - Software distribution and installation - monitoring 					
4	<p>Course form</p> <p>Lecture, Tutorial, Practical Project</p>					
5	<p>Prerequisites for attending</p> <p>Formal: none Content: none</p>					
6	<p>Form of examination</p> <p>Written exam Presentation</p>					

	Term paper Oral examination Examination (successfully completed project, presentation and written paper)
7	Prerequisites for granting ECTS Passed exam
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Daniel Kulesz Tutor: Prof. Dr. Daniel Kulesz
12	Literature: Ludewig, J. und Lichter, H.: Software Engineering - Grundlagen, Menschen, Prozesse Techniken, 4. Auflage, dpunkt, 2023 Balzert, H.: Lehrbuch der Softwaretechnik: Entwurf, Implementierung, Installation und Betrieb, 3. Auflage, Spektrum, 2011 Gamma, Erich: Design Patterns. Elements of Reusable Object-Oriented Software; latest Edition, Prentice Hall

1.3 System Analysis (M-IN-IN04)

Systems Analysis, System Analyse (SYSA)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 2 WT (start): 1		winter term	1 term
1	Course Lecture and tutorials		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	Learning Outcomes Students acquire knowledge of model building. They can classify and define systems and determine system boundaries. For the modeling and analysis of systems, students can use methods from different areas of computer science and mathematics.					
3	Content - Systems and models - Model building - Cellular automata - Learning agents - Chaos theory - Self-organizing systems - Game Theory - Swarm Intelligence - Stochastic processes and queues					
4	Course form Lecture and tutorials					
5	Prerequisites for attending Formal: none Content: none					
6	Form of examination presentation written exam					
7	Prerequisites for granting ECTS Passed exam					
8	Utilization of the module (in other studies) This module is not used in other courses					

9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Frank Mehler Tutor: Prof. Dr. Frank Mehler
12	Literature: H. Bossel: Systeme, Dynamik, Simulation, Modellbildung. Analyse und Simulation komplexer Systeme, Norderstedt D. Imboden, S. Koch; Systemanalyse, Einführung in die mathematische Modellierung natürlicher Systeme, Springer-Verlag J. Schmidt, Ch. Klüver, J. Klüver: Programmierung naturanaloger Verfahren, Vieweg+Teubner O. Loistl, Chaostheorie: Zur Theorie nichtlinearer dynamischer Systeme, Oldenbourg-Verlag Ch. Rieck, Spieltheorie, Eine Einführung, Eschborn Th. Schickinger, A. Steger, Diskrete Strukturen, Band 2: Wahrscheinlichkeitstheorie und Statistik

1.4 Advanced Database Systems (M-IN-IN03)

Advanced Database Systems, Vertiefung Datenbanksysteme (VEDA)						
ID	Workload 180h	ECTS 6	Term at study start ST (start): 2 WT (start): 1		Frequency summer term	Duration 1 term
1	Course Lecture and Tutorials		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	Learning Outcomes Students know the architecture and structure of relational database systems. They know physical storage and index structures. They understand the issues of multi-user synchronization, serializability even for long-running transactions, and logging and recovery. You understand the 2-phase commit protocol for distributed transactions. They know concepts of distributed database systems as well as for database replication. Students know the structure and tasks of a data warehouse. They know the meaning of ETL, different approaches to modeling the base database of a DWH (Inmon, Kimball, Data Vault) and the modeling of data cubes and data marts (Star Schema etc.). You are able to design a DWH and to implement its essential components exemplarily. You will be familiar with extended query options for a DWH, in particular using "Analytical SQL", and will be able to apply these in practice.					
3	Content - Layer models of database systems - Physical storage structures - Different index structures - Transaction management and advanced transaction concepts also for distributed databases - Database replication - Synchronization, locking procedures and serializability - Log files and recovery - Datawarehouse and OLAP: Architecture, Modeling, ETL, Analytical SQL					
4	Course form Lecture and tutorials					
5	Prerequisites for attending Formal: none Content: Basics of database systems, especially relational databases					
6	Form of examination written exam oral examination the exam form is determined at the beginning of the semester					

7	Prerequisites for granting ECTS Passed exam
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Michael Schmidt Tutor: Prof. Dr. Michael Schmidt
12	Literature: - script of the lecture - Kemper, A.: „Datenbanksysteme“, Oldenbourg, aktuelle Auflage - Garcia-Molina, H.: „Database Systems - The Complete Book, Pearson - Heuer, A.: „Datenbanken - Konzepte und Sprachen“, Mitp-Verlag - Heuer, A.: „Datenbanken: Implementierungstechniken“, Mitp-Verlag - Hahne, M.: „Modellierung von Business Intelligence-Systemen, dpunkt.verlag - Kemper, H.G.: „Business Intelligence - Grundlagen und praktische Anwendungen“, Vie-weg+Teubner - Köppen v. et al.: „Data Warehouse Technologien“ - Lehner W.: „Datenbanktechnologie für DWH-Systeme“, dpunkt.verlag - Bauer A. et al.: „Data Warehouse Systeme“, dpunkt.verlag

1.5 Scientific Course (M-IN-IN05)

Scientific Course, Wissenschaftliches Seminar (WISE)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 1 WT (start): 2		summer term	1 term
1	Course Seminar		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	Learning Outcomes Students are able to compile the state of the art of a specific research topic in the field of computer science as well as to understand the content of a scientific paper. They are able to put together a scientific presentation plus to give a lecture on it. The students have the ability to classify and evaluate a scientific contribution and to differentiate between its significance for research and application. Furthermore, the students have acquired in-depth knowledge and skills for scientific work.					
3	Content - Up to date /latest scientific publications from different areas fo Computer Science, like database technologies, cybersecurity, robotics, system architectures, software-engineering, artificial intelligence, operating systems, post-quantum cryptography, web technologies, mobile systems etc.					
4	Course form seminaristic					
5	Prerequisites for attending Formal: none Content: none					
6	Form of examination Oral examination, presentation; The form of examination will be determined at the beginning of the course. i.a. English lecture, min. 60 min.					
7	Prerequisites for granting ECTS Passed exam					
8	Utilization of the module (in other studies) This module is not used in other courses					

9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Thomas Marx Tutor: Prof. Dr. Thomas Marx
12	Literature: Current scientific papers of the recent 1-2 years, accepted (blind referee) at scientific conferences (e.g. published Lecture Notes in Computer Science etc.)

2 Mathematics

2.1 Higher Mathematics (M-IN-MNS01)

Higher Mathematics for Information Systems, Höhere Mathematik (HÖMA)						
ID	Workload 180h	ECTS 6	Term at study start ST (start): 1 WT (start): 2		Frequency summer term	Duration 1 term
1	Course Lecture and tutorials		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	<p>Learning Outcomes</p> <p>Students know the basic concepts, theorems and algorithms of algebra and discrete mathematics, which are essential for a deeper understanding of various areas of</p> <ul style="list-style-type: none"> - theoretical computer science (such as algorithms, data structures, languages and complexity theory) and - applied computer science (such as cryptography and coding theory). <p>are needed. You will be able to apply these concepts and algorithms.</p> <p>They know the basic concepts of a structure-oriented algebra such as substructure, factor structure, homo- and isomorphism. They know basic notions of order theory and elementary examples of partially ordered sets.</p> <p>The students deepen their abilities to understand formal arguments and to formulate them themselves in a technically precise way with regard to a possible own scientific activity.</p>					
3	<p>Content</p> <ul style="list-style-type: none"> - Relations (equivalence, order, congruence relations) - semigroups, monoids, groups, rings, solids - Group theory (subgroup, normal divisor, factor group, homomorphism theorem) - Representation of groups with generators and relations, with permutations and with matrices - Ordered sets (general terms and constructions, as well as standard examples from combinatorics) 					
4	Course form Lecture and tutorials					
5	Prerequisites for attending Formal: none Content: none					
6	Form of examination Written exam					
7	Prerequisites for granting ECTS Passed exam					
8	Utilization of the module (in other studies) This module is not used in other courses					
9	Weight for the final score					

	Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Tino Schürg Tutor: Prof. Dr. Tino Schürg
12	Literature: - Fraleigh: A First Course in Abstract Algebra - Pinter - A Book of Abstract Algebra 2nd ed. - Witt: Algebraische und zahlentheoretische Grundlagen der Informatik (eBook) - Davey , Priestley: Introduction to Lattices and Order, 2nd ed. - Ganter: Diskrete Mathematik: Geordnete Mengen

3 Practice

3.1 Master Thesis (M-IN-PP01)

HMaster Thesis, Masterarbeit mit Kolloquium (MAST)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	450h	15	ST (start): 3 WT (start): 3		any term	1 term
1	Course		Contact time lecture	Contact time other	Self-studies	Planned group size
	Thesis		0h	0h	450h	1 student
2	Learning Outcomes					
	<p>The students are enabled to work independently on a complex problem or task from science, industry or society.</p> <p>or society and to solve it independently. They are able to assess and evaluate different and evaluate different approaches. To solve the problem, they apply the technical and interdisciplinary knowledge acquired during the course of study. Students plan and organize their scientific work independently. Scientific sources of information can be analyzed and evaluated. be evaluated. The results are formulated and presented in a scientifically accurate manner in the master's thesis.</p> <p>In the colloquium, the students present their approach, methods and results coherently and logically.</p>					
3	Content					
	<p>The master's thesis is written either at the university or at or in cooperation with a company/institution. company / institution.</p> <p>The university lecturer acts as supervisor. He supports the students in personal discussions regarding the compliance with the above mentioned learning and qualification goals. Depending on the task, several students can also work on the same project, however, each one work independently.</p>					
4	Course form					
	Personal coaching, colloquium					
5	Prerequisites for attending					
	Formal: accomplished master modules (6 ECTS may be missing) Content: none					
6	Form of examination					
	Thesis and colloquium (30 minutes), both in English or German					
7	Prerequisites for granting ECTS					
	Passed exam					
8	Utilization of the module (in other studies)					
	This module is not used in other courses					

9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Thomas Marx Tutor: all Computer Science Professors at TH-Bingen
12	Literature: Sample master's theses, guidelines and presentations for the colloquium, as well as a list of recommended basic literature are provided

4 Complementary Modules (Computer Science)

4.1 Advanced Data Mining with R (M-IN-WP36) / AI

Advanced Data Mining with R, Fortgeschrittenes Data Mining mit R (ADAM)						
ID	Workload 180h	ECTS 6	Term at study start ST (start): 2 WT (start): 1		Frequency winter term	Duration 1 term
1	Course Lecture and Tutorial		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	Learning Outcomes After completing the module, students will be able to: <ul style="list-style-type: none"> - classify and apply basic methods of data mining for the analysis of e.g. microarray data in medical diagnostics. - describe the entire processing chain of e.g. microarray data starting from image processing up to medical diagnosis - to write small programs independently in the statistical programming language R - use existing program packages (from CRAN and Bioconductor) and write own R packages - select statistical methods for data analysis and interpret their results interpret them - generate reusable web components using HTML, CSS, and Javascript - use such web components to analyze and visualize data - create interactive scientific plots that enable the user to better explore scientific data and thus aid the scientist in hypothesis formation and validation 					
3	Content The course covers the following topics <ul style="list-style-type: none"> - Introduction to medical diagnostics with microarrays and expression data - Introduction to software for recognition and processing of microarray image data - Performing normalizations to make different experiments comparable - Measuring and assessing variability in biological data - Analyzing relationships between genes, tissues, treatments, experiments, etc. - Reducing large amounts of data, selecting relevant data - Dealing with (too small) samples, bootstrapping - Distances and correlation coefficients - Clustering and classification, basics of data mining - Visualization of results (boxplot, heat map, dendrogram, etc.) - Data standards and databases - Basics of the statistical programming language R - algorithms for data analysis - efficient implementation for the client using advanced features of Javascript and possibly Web-Assembly - programming of reusable web components: covering specifics like the shadow DOM and asynchronous functions 					

4	Course form Lecture and Tutorial
5	Prerequisites for attending Formal: none Content: none
6	Form of examination Written exam
7	Prerequisites for granting ECTS passed examination passed academic performance Explanations: Passed module examination (examination performance) and successful completion of an R programming task (course performance).
8	Utilization of the module (in other studies) This module is not used in other courses.
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Asis Halab Tutor: Prof. Dr. Asis Halab
12	Literature: Script of the lecture Falk, Hain, Marohn, Fischer & Michel, Statistik in Theorie und Praxis - Mit Anwendungen in R, Springer eBook Wollschläger, Grundlagen der Datenanalyse mit R - Eine anwendungsorientierte Einführung, Springer (eBook) Kronthaler, Statistik angewandt - Datenanalyse ist (k)eine Kunst mit dem R Commander, Springer (eBook) Hedderich & Sachs, Angewandte Statistik - Methodensammlung mit R, Springer (eBook) Stekel, D.: Microarray Bioinformatics, Cambridge University Press, 2003 Dziuda, Data Mining for Genomics and Proteomics: Analysis of Gene and Protein Expression Data, Wiley Bioconductor (http://www.bioconductor.org/)

4.2 Computer Vision (M-IN-WP35) / AI

Computer Vision, aktives Sehen (COVI)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 2 WT (start): 1		winter term	1 term
1	Course Lecture Workshop Tutorial Excursion (optional)		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	Learning Outcomes The students learn the complete process chain of computer vision from image acquisition and data transfer to computational image analysis. They are familiar with the most important machine vision algorithms and are practiced in the application of free open-source software (OpenCV and Keras/TensorFlow with Python-API) and proprietary software (e.g. HALCON or VisionPro). The different approaches and pros/cons of traditional image processing versus deep learning techniques are understood. The students are able to familiarize themselves with new topics in the field of computer vision and can present their acquired knowledge in an understandable way.					

3	Content - Introduction and Overview - Image Acquisition (illumination, lenses, cameras, data interfaces) - Machine Vision Algorithms (data structures, image enhancement, geometric transformations, image segmentation, feature extraction, morphology, edge extraction, camera calibration, 3D-reconstruction, optical character recognition) - Deep Learning for Machine Vision - Machine Vision Applications with OpenCV, Keras/TensorFlow and HALCON or VisionPro Optional (if possible): Excursion to a company in the field of Computer Vision
4	Course form Lecture combined with student workshops, project work and presentations; optional excursion
5	Prerequisites for attending Formal: none Content: none
6	Form of examination Assignment Project work and oral examination (assessment of the project presentation)
7	Prerequisites for granting ECTS Presentation of assignment/project work with positive assessment
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Dipl.-Phys. Michael Haag-Pichl Tutor: Dipl.-Phys. Michael Haag-Pichl
12	Literature: A. Nischwitz, M. Fischer, P. Haberäcker, G. Socher: Bildverarbeitung, Springer Vieweg, ISBN 978-3-658-28704-7 C. Steger, M. Ulrich, C. Wiedemann: Machine Vision Algorithms and Applications, Wiley-VCH, ISBN 978-3-527-41365-2 F. Chollet: Deep Learning with Python, Manning Publications, ISBN 978-1617296864 https://docs.opencv.org/4.6.0/index.html https://pyimagesearch.com

4.3 Planning and Scheduling (M-IN-WP32) / AI

Planning and Scheduling, Planen und Terminisierung (PLANS)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 1 WT (start): 2		summer term	1 term
1	Course text		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	Learning Outcomes The students know concepts, methods, and tools for task-level planning and scheduling. Methodological competency: The students know the state-of-the-art in task planning and are able to select and apply adequate methods for use in robotics applications. Individual competency: Improved ability to perform abstract thinking and logical reasoning. Ability to formalize domain concepts in appropriate logics.					

3	Content <ul style="list-style-type: none"> • Knowledge representation • Formalizing action and action theories • State space planning: STRIPS and friends • Plan space planning: POP and friends • Graph-based planning • SAT-based planning • HTN planning • Scheduling and resource constraints • Conditional planning, POMDPs • Planning for multiagent systems
4	Course form <ul style="list-style-type: none"> • Attendance study: Presents lecturers, moderated discussions, group work • Online supervision: (digital) exercises, repetitions (individual or in groups), in-depth studies (quantitative and qualitative methods) • Self-study: learning with study letters, source study, exercises for self-study.
5	Prerequisites for attending Formal: none Content: none
6	Form of examination project work oral examination
7	Prerequisites for granting ECTS Passed exam
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Thomas Marx Tutor: Iman Awaad (MSc Computer Science)
12	Literature: <ul style="list-style-type: none"> - Ghallab & Nau & Traverso: Automated Planning. Morgan Kaufmann, 2004. - Russell & Norvig: Artificial Intelligence – A Modern Approach, 3rd edition. Prentice Hall, 2002. - Richard Conway, William Maxwell, Louis Miller: Theory of Scheduling, Dover Publications, 1967 - Dana S. Nau. 2007. Current trends in automated planning. AI Magazine, Vol. 28, No. 4. - Dana S. Nau, Malik Ghallab, and Paolo Traverso. 2015. Blended planning and acting: preliminary approach, research challenges. In Proceedings of the Twenty-Ninth AAAI Conference on Artificial Intelligence (AAAI'15). AAAI Press 4047-4051

4.4 Network Security (M-IN-WP41)

Network Security, Netzwerksicherheit (NETS)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 1 WT (start):2		summer term	1 term
1	Course Lecture and Tutorials		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students

2	Learning Outcomes Students are aware of vulnerabilities and attacks at the system and network security level; - Students are familiar with specific system and network attacks and the underlying principles; - Students know procedures and mechanisms to defend against these attacks.
3	Content Attacks and defenses in the context of network and operating system security, including: - Stack and heap overflows, format string vulnerabilities, integer overflows, etc. - Malware: viruses, worms, Trojans and botnets. - Attacks and security measures for different network layers, including firewall, VPN, IDS - Security measures for authentication, anonymity and trust - Web security: cross-site scripting (CSS/XSS), SQL injection, cross-site request forgery - Decentralized systems: Blockchain, peer-to-peer networks, opportunistic networks.
4	Course form Lecture and Tutorials
5	Prerequisites for attending Formal: none Content: none
6	Form of examination Written examination
7	Prerequisites for granting ECTS Passed exam
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Jens Reinhardt Tutor: Prof. Dr. Kálmán Graffi
12	Literature: Steffen Wendzel: IT-Sicherheit für TCP/IP- und IoT-Netzwerke: Grundlagen, Konzepte, Protokolle, Härtung

4.5 ERP in the cloud (M-IN-WP40)

ERP in the Cloud, ERP in der Cloud (ERPC)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 2 WT (start): 1		winter term	1 term
1	Course Lecture plus workshops		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	Learning Outcomes The students know basic principles about Cloud Computing, Cloud Development, SAP Business Technology Platform and how international companies make use of SAP Business Technology Platform and other Cloud Products. Especially the required techniques and programming languages for Cloud Development are understood by the students. The students know how to develop, deploy, test and run Cloud Application on SAP BTP.					

3	Content - GxP requirements, Documentation Practices (optional) - Cloud Computing, IaaS, PaaS, SaaS - Business Technology Platform (BTP) Account Structure, Services, Integration in existing landscape - BTP BAS (Business Application Studio), Good coding principles - Security/Authentication/Authorization in the cloud - UI5 Workframe, CAP Modell, ODATA Protocol, CDS (HDI Container) - LC/NC (low code/no code) Development (controls/navigation)
4	Course form Lecture combined with student workshops, project work
5	Prerequisites for attending Formal: none Content: JavaScript, Web technologies (e.g HTML, CSS, etc), APIs, CRUD Operations
6	Form of examination Project work and oral examination (assessment of the project presentation)
7	Prerequisites for granting ECTS Presentation of assignment/project work with positive assessment
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Sven-Gerrit Dieckmann Tutor: Sven-Gerrit Dieckmann
12	Literature: SAP Academy https://open.sap.com/ UI5 Documentation https://ui5.sap.com CAP Dokumentation https://cap.cloud.sap/docs/about/ UI5 Walkthrough https://ui5.sap.com/#/topic/3da5f4be63264db99f2e5b04c5e853db OData Documentation https://www.odata.org/documentation/

4.6 Natural Language Processing (M-IN-WP34) / AI

Natural Language Processing, Verarbeitung natürlicher Sprache (NALP)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 2 WT (start): 1		winter term	1 term
1	Course Lecture plus workshops		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	Learning Outcomes Students learn the fundamentals of automatically processing natural language. They know how to turn sentences into features and how machine learning models can be trained and applied to them. The students know how to solve common applications like sentiment analysis, translation, speech recognition and speech synthesis. They are familiar with common frameworks for implementing natural language processing systems.					
3	Content - Tokenization, stemming, chunking - Word embeddings - Recurrent neural networks - Attention mechanisms and transformers					

	<ul style="list-style-type: none"> - Sentiment analysis - Machine translation - Speech recognition and synthesis - Ethical aspects of natural language generation
4	Course form Lecture combined with student workshops, project work
5	Prerequisites for attending Formal: none Content: none
6	Form of examination Oral examination, presentation or written exam
7	Prerequisites for granting ECTS Passed exam
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Florian Dahms Tutor: Prof. Dr. Florian Dahms
12	Literature: Current publications in the field of natural language processing

4.7 Autonomous and Mobile Robots (M-IN-WP33) / AI

Autonomous and Mobile Robots, autonome und mobile Roboter (AROB)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 2 WT (start): 1		winter term	1 term
1	Course Lecture plus workshops		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	Learning Outcomes <ul style="list-style-type: none"> - Students will be able to describe and classify the different AI paradigms for mobile robots (reactive, deliberative, hybrid). - Students can explain and evaluate the most important sensors and actuators for mobile robots. Students can describe compare and use the basic planning and navigation methods in mobile robotics. - Students can discuss basic approaches to robot learning and multi-robot and human-robot interaction. - Students can present the state of knowledge and current trends in mobile robotics and explain them using example robots. - Students will be able to design and program mobile robots yourself. 					
3	Content <ul style="list-style-type: none"> - Reactive behavior - Sensors - Actuators, kinematics of drives - Hybrid deliberative/reactive behavior - Action planning - maps, self-localization - path planning, navigation - Robot learning - Error detection and healing - Multi-robot 					

	<ul style="list-style-type: none"> - Human-robot interaction - Current trends - example platforms
4	Course form Lecture combined with student workshops, project work
5	Prerequisites for attending Formal: none Content: none
6	Form of examination Oral exam, presentation, project work
7	Prerequisites for granting ECTS Passed exam
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Thomas Marx Tutor: Prof. Dr. Thomas Marx
12	Literature: <ul style="list-style-type: none"> - Siciliano, Bruno; Khatib, Oussama: Handbook of Robotics. Springer. Berlin-Heidelberg. 2016. - J. Hertzberg, K. Lingemann, A. Nüchter: Mobile Roboter - Springer Vieweg 2012 - R. Siegwart, I. R. Nourbakhsh: Introduction to Autonomous Mobile Robots - Cambridge, MA: The MIT Press 2011 - R. R. Murphy: Introduction to AI Robotics - Cambridge, MA: The MIT Press 2000

4.8 Individual Profiling (M-IN-WP28)

Individual Profiling (IPROF)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 1 or 2 WT (start): 1 or 2		any term	1 term
1	Course Self-studies and consultations		Contact time lecture 0h	Contact time other 30h	Self-studies 150h	Planned group size 1 student
2	Learning Outcomes The elective aims at the individual profile formation of the students. Within the framework of a freely defined task that they can solve complex problems largely independently with limited support from the the supervisor to a large extent independently. It is expected that the students independently familiarize themselves with the necessary techniques for solving the problem posed. The problems to be worked on should be posed in such a way that they cannot be solved completely by means of compulsory lectures.					
3	Content The content forms current areas of computer science in which students wish to delve. The choice of the topic takes place in dialogue between students and university lecturer.					
4	Course form 2 SWS consultations					
5	Prerequisites for attending Formal: none Content: none					

6	Form of examination Presentation Term Paper
7	Prerequisites for granting ECTS Passed exam
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Thomas Marx Tutor: Computer Science Professor at TH-Bingen
12	Literature: Current literature depending on the chosen topic.

4.9 New Database Systems (M-IN-WP22)

New Database Systems, Neue Datenbanksysteme (NDBS)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 1 WT (start): 2		summer term	1 term
1	Course Lecture plus tutorials		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	<p>Learning Outcomes</p> <p>The students know the theoretical basics of NoSQL database systems. They are familiar with the concepts of key vault stores, wide column stores, graph databases and document stores and can assess in which scenarios these database technologies can be used sensibly.</p> <p>Object-relational mapping technologies (especially JPA) are known and can be applied in own applications. Object-relational extensions of relational databases are known and can be used in examples. The students know basic concepts of OODBMS.</p> <p>The interaction of XML and relational databases is known (SQL/XML) and can be used for generating XML documents from relational structures as well as for querying XML documents in the database using XQuery. The interaction of JSON and relational databases is known (SQL/JSON) and can be applied for the generation of JSON documents from relational structures as well as for the query of JSON documents in the database. The students know basic concepts of and application fields for "in-memory databases".</p> <p>Emphasis and exact contents will be agreed upon at the beginning of the course, whereby also current developments in the area of DBMS will be considered. The learning and qualification objectives will be adjusted accordingly, if necessary.</p>					
3	<p>Content</p> <ul style="list-style-type: none"> - Basics of NoSQL databases (CAP theorem, BASE, Consistent Hashing, Map-Reduce, etc.) - Types of NoSQL databases (key vault stores, wide column stores, graph databases, document stores) - Object Relational Mapping with JPA - OODBMS and ORDBMS - SQL/XML incl. XQuery - SQL/JSON - In-Memory DBMS 					
4	<p>Course form</p> <p>Lecture combined with student workshops, project work</p>					

5	Prerequisites for attending Formal: none Content: Module "Database Systems" of Bachelor in Computer Science
6	Form of examination Written exam Presentation Term paper Oral exam Preferably oral examination or lecture
7	Prerequisites for granting ECTS Passed exam
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Michael Schmidt Tutor: Prof. Dr. Michael Schmidt
12	Literature: Kemper, A.: „Datenbanksysteme“, aktuelle Auflage, Oldenbourg - Müller, B.; Wehr, H.: „Java Persistence API 2“, Hanser - Edlich et al.: NoSQL - Einstieg in die Welt nichtrelationaler WEB 2.0 Datenbanken, Hanser - Plattner H.; Zeier A.: „In-Memory Data Management“, Springer - Plattner H.: „Lehrbuch In-Memory Data Management: Grundlagen der In-Memory-Technologie“, Springer - Meier A., Kaufmann M.: "SQL- & NoSQL-Datenbanken", 2016 Springer, eBook - Lehner W.;Schöning H.: „XQuery – Grundlagen und fortgeschrittene Methoden“, dpunkt.verlag - weitere Literatur je nach Schwerpunkten - Fasel D., Meier A.: "Big Data - Grundlagen, Systeme und Nutzungspotenziale", 2016, Springer, eBook

4.10 Simulation (M-IN-WP09)

Simulation, Simulation (SIMU)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 1 WT (start): 2		summer term	1 term
1	Course Lecture plus tutorials		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	Learning Outcomes The students know the methodical basics of modeling and simulation of systems from diverse various application areas. They are familiar with the most important components, the mode of operation and the handling of a simulation system. The students know the different methods of time control. They are able to understand and deal with simulation languages and systems. Furthermore, the students are able to independently develop a model for a concrete problem, to implement it and to use it for simulation. to develop and implement a model for a concrete problem and to carry out simulations professionally. In addition, you will be able to independently develop software components of a simulation system or individually adapt existing adapt.					

3	Content <ul style="list-style-type: none"> - Problem of modeling and simulation - Concepts of model building - Continuous models: methods for obtaining the system equations in different application areas - Methods of continuous simulation (numerical procedures for the solution of the occurring equations) - Discrete models (decision models, sequence problems, events) - Methods of discrete simulation (Petri nets, cellular automata, scheduling) - Simulation systems/simulators (presentation of different systems and their use) - simulation languages - Analysis and interpretation of simulation experiments - Validation and verification of a simulation model by implementation in a simulation system.
4	Course form Lecture combined with tutorials (2 SWS each)
5	Prerequisites for attending Formal: none Content: High school Mathematics
6	Form of examination Oral or written exam
7	Prerequisites for granting ECTS Passed exam
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr.-Ing. Luckas Tutor: Prof. Dr.-Ing. Luckas

Springer, ISBN 978-0-387-96467-6 T. T. Allen: Introduction to Discrete Event Simulation and Agent-based Modeling: Voting Systems, Health Care, Military, and Manufacturing. Springer, ISBN 978-0-857-29138-7 A. M. Law: Simulation Modeling & Analysis. McGraw-Hill Professional, ISBN 978-0-071-25519-6

4.11 E-Learning (M-IN-WP03)

Title (ABR)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 2 WT (start): 1		winter term	1 term
1	Course Lecture plus tutorials		Contact time lecture	Contact time other	Self-studies	Planned group size
			60h	0h	120h	25 students
2	Learning Outcomes Knowledge of the various users and roles of an LM system and their requirements for the LM system. Ability to analyze the requirements and ability to map the requirements to different services and interfaces. Understanding of the interaction of multiple user groups and roles in an LM system. Integration of services and basic functionalities to form role-specific					

	usage scenarios and corresponding usage interfaces. Evaluation of a LM system from different views: on the one hand the user view (e.g. as a course author, who creates a course fragment) and on the other hand) and on the other hand as a system developer who functionally extends the LM system.
3	<p>Content</p> <p>The tasks and the interaction of the different users and roles of a learning management system (LM-system) are presented.</p> <p>Management System (LM-System). The roles of learners, instructors, tutors, authors and administrators will be tutors, authors and administrators. Their different tasks are considered (e.g. course material management, user, rights and cost management, integration of external resources, etc.).</p> <p>external resources, etc.). The resulting requirements for a LM system are derived.</p> <p>Services and interfaces of LM systems are considered. Furthermore, the characteristics of of different forms of learning, as well as norms and standards in the area of LM systems (SCORM, Dublin-Core, LMO, ...) are presented. The learning material lifecycle will be taught. The theoretical knowledge will be deepened in two small team phases.</p> <p>On the one hand, the prototypical creation and integration of an e-learning course fragment in an LMSystem will be will be carried out. In this process, course materials are planned and created. These are modularized, provided with meta data and integrated into an LM system.</p> <p>Furthermore, the development of LM systems is considered. For this purpose either based on a a new functionality to be implemented is identified based on a requirements analysis of a certain user group and then integrated into an LMS or comparative analyses of existing LMSs are carried out.</p> <p>taken.</p>
4	<p>Course form</p> <p>Seminaristic plus terminal based tutorials</p>
5	<p>Prerequisites for attending</p> <p>Formal: none</p> <p>Content: none</p>
6	<p>Form of examination</p> <p>Project work</p>
7	<p>Prerequisites for granting ECTS</p> <p>Passed exam</p>
8	<p>Utilization of the module (in other studies)</p> <p>This module is not used in other courses</p>
9	<p>Weight for the final score</p> <p>Weighting according to the ECTS points</p>
10	<p>Module commissioner: Prof. Dr.-Ing. Maximilian Mengel</p> <p>Tutor: Prof. Dr.-Ing. Maximilian Mengel</p>
12	<p>Literature:</p> <p>Lecture script</p> <ul style="list-style-type: none"> - A. Schreiber: CBT-Anwendungen professionell entwickeln, Springer Verlag Wien: Studien Verlag. - R. S. Schifman, G. 5.2 Innovation and IT (M-IN-WP39)

Innovation & IT, Innovation und IT (INOV)					
Workload	ECTS	Term at study start		Frequency	Duration
180h	6	ST (start): 1 WT (start): 2		summer term	1 term
Course		Contact time lecture	Contact time other	Self-studies	Planned group size
Seminar		30h	30h	120h	25 students
Learning Outcomes					
<p>Students know and recognize basic digital economy concepts and IS-based business models. They are familiar with ideas concerning the application of IS-based innovations, networks and platforms for communication, inter- action and transaction in a globalized world and can analyze and apply them.</p> <p>Students are aware of the digital economy's main innovative concepts, methods, and instruments. Students are able to distinguish IS-based business model applications, implementations, and innovations. They are able to reflect, analyze, discuss and apply those concepts. Students are able to assess the value of digital business, trans- formation, and the economics of digitization. They are capable of assessing applied practical implementations in a competent way. Students recognize business transformations induced by IS innovations, and are able to reflect and apply concepts and models to actual cases by design. They are capable of reflecting potential social and cultural impacts and gain knowledge in a self-directed manner.</p> <p>Due to a comprehensive statement of current topics students gain broad knowledge. In-depth insights into innovative best demonstrated available technology (such as big data and business analysis) and its business application deepen their knowledge. Decision-making under uncertain conditions is required.</p> <p>Students team up in small groups and are able to lead small teams in a responsible way, research and apply knowledge in a self-directed manner, and discuss their results. They are able to promote professional development of their fellow students' appropriate knowledge and discuss their results with peers and with experts.</p> <p>Self-motivation/self-study</p> <ul style="list-style-type: none"> • Homework/Exercise (Breadth) <p>Fundamental concepts of economic decisions (eg value chains and business systems) are repeated. Concepts of innovation management have to be read, analyzed and discussed.</p> <ul style="list-style-type: none"> • Homework / Exercise (Depth) <p>Important topics such as neo-mediation or disintermediation are prepared in self-study and subsequently discussed in detail.</p>					

Content

Innovation, digital economy, transformation classification in a scientific context
Current topics and best demonstrated available IS-technology
Terminology, concepts and models: innovation, digital economy, transformation, and IS-based business models
Selected case studies
Applied digital economy, transformation applications
Trends (e. g. mobile business)
Social and cultural context and impact

Course form

Seminar

Prerequisites for attending

Formal: none
Content: none

Form of examination

Written examination in the form of a self-directed project including presentation (100 %)

Prerequisites for granting ECTS

text

Utilization of the module (in other studies)

This module is not used in other courses

Weight for the final score

Weighting according to the ECTS points

5.3 Advanced Software Engineering: Principles & Structures (M-IN-WP38)

Advanced Software Engineering: Principles & Structures, Fortgeschrittenes Software-Engineering: Prinzipien und Strukturen (ADSE)						
ID	Workload 180h	ECTS 6	Term at study start ST (start): 1 WT (start): 2		Frequency summer term	Duration 1 term
1	Course Seminar		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	<p>Learning Outcomes</p> <p>The students know advanced topics and interrelationships in the subject areas of software engineering: Requirements engineering, specification as well as system architecture, development processes and related aspects of quality and security. The students therefore are familiar with modern principles and paradigms in the field of software design, development, deployment and operation. They can apply this knowledge to practical problems. The analysis, design and development of software systems can be actively accompanied by the students as part of a leading team. They also know how to coordinate the activities in the development and deployment chain of large software systems and are able to assess technical and economic risks as well as software quality.</p> <p>Competencies</p> <p>The course covers aspects of the development process from the determination of requirements to quality assurance. Students use common platforms, frameworks and tools to train their ability to plan, monitor and control large complex projects.</p> <p>Working on questions in small groups trains in dealing with conflicting goals, promotes discussion, critical faculties and presentation.</p> <p>The module contributes in particular to the development of leadership competences. The handling of case studies and case studies promotes the necessary decision-making competence. In addition, rhetorical skills and the ability to convince and motivate employees are of great importance.</p> <p>Self-motivation/self-study</p> <p>- Homework / Exercise (Width)</p> <p>After an introductory presentation, the students work independently into concrete projects and gain in particular an impression of the complexity.</p> <p>- Homework / Exercise (Design)</p> <p>The students develop specific, corresponding solutions for selected questions in software engineering and develop concrete implementation approaches.</p> <p>All previously during the study program acquired knowledge is brought together here</p>					
3	<p>Content</p> <p>Requirements engineering: methods and processes for the definition, documentation and management of functional and non-functional requirements.</p> <ul style="list-style-type: none"> - Software architecture: design and construction principles, paradigms and structural styles (like microservices), reference architectures, frameworks and libraries. - Software development process: management of complex software development projects, management of software product lines, versioning, prototyping, agile methods - Software deployment, delivery and operating: Common and crucial aspects of the deployment, delivery and operating chain of software systems as far as these are associated to software engineering: e.g. container, distributed systems, cloud computing, software as a service (SaaS), edge and fog computing 					
4	<p>Course form</p> <p>Seminaristic</p>					
5	<p>Prerequisites for attending</p> <p>Formal: none Content: none</p>					

6	Form of examination Written examination in the form of a self-directed project including presentation (presentation 40% /documentation 60%)
7	Prerequisites for granting ECTS Passed exam
8	Utilization of the module (in other studies) This module is not used in other courses
9	Weight for the final score Weighting according to the ECTS points
10	Module commissioner: Prof. Dr. Jens Reinhardt Tutor: Prof. Dr. Jens Reinhardt

5.4 Business Models and IT-Strategy (M-IN-WP37)

Business Models and IT-Strategy, Geschäftsmodelle und IT-Strategie (BMST)						
ID	Workload	ECTS	Term at study start		Frequency	Duration
	180h	6	ST (start): 1 WT (start): 2		summer term	1 term
1	Course Lecture		Contact time lecture 30h	Contact time other 30h	Self-studies 120h	Planned group size 25 students
2	<p>Learning Outcomes</p> <ul style="list-style-type: none"> - By developing different business models and identifying appropriate IT strategies, the students assess critically possible scenarios by means of discussions, current case studies and research approaches. - The students know how companies can take advantage of changes in the market through appropriate transformations of value chains and business systems to their advantage. They can develop IT strategies that support the company's objectives or enable specific business models. Objectives and architectures of inter-company networking can be explained using current examples from various sectors. In particular, they understand the role that IT can play as a differentiating factor in the implementation of innovative business models, and the impact of IT innovations on the business and IT strategy. - Competencies - The module contributes in particular to the development of leadership competences. The handling of case studies and case studies promotes the necessary decision-making competence. In addition, rhetorical skills and the ability to convince and motivate employees are of great importance. - Self-motivation/self-study - Homework / Exercise (width) After an introductory presentation, the students work independently into concrete business models as well as corresponding IT strategies and gain in particular an impression of the complexity. - Homework / Exercise (Design) The students develop specific, corresponding IT strategies for selected business models and develop concrete implementation approaches. <p>All previously during the study program acquired knowledge is brought together here</p>					

3	<p>Content</p> <ul style="list-style-type: none"> - Development of IT strategy and alignment with the business strategy Business models and development strategies - Relationship between business model and IT strategy - Case studies <p>Typical examples of content are:</p> <ul style="list-style-type: none"> - ICT Governance: Targeting the IT strategy according to the business strategy, e.g. by means of Control Objectives for Information and Related Technology (COBIT). - B2B and B2C scenarios, e.g. Integrated Production, Collaboration Networks, Mass Customization. - Case studies: IT as an enabler of innovative business models
4	<p>Course form</p> <p>Seminar (lecture, practical parts, self-learning/study hours)</p>
5	<p>Prerequisites for attending</p> <p>Formal: none Content: none</p>
6	<p>Form of examination</p> <p>Written examination in the form of a self-directed project (business model and corresponding IT strategy) including presentation (Presentation 40% /documentation 60%)</p>
7	<p>Prerequisites for granting ECTS</p> <p>Passed exam</p>
8	<p>Utilization of the module (in other studies)</p> <p>This module is not used in other courses</p>
9	<p>Weight for the final score</p> <p>Weighting according to the ECTS points</p>
